

LucentID — Security Feature List

A. Core Enterprise Zero Trust Features (Implemented) (Equivalent to Google BeyondCorp / Microsoft Entra)

1. Identity Authentication

Secure email & password login

Multi-Factor Authentication (OTP, PIN)

Step-up verification for sensitive actions

Password re-verification for critical operations

2. Trusted Device Management

Device fingerprinting

Automatic device registration

New device detection & approval

Trusted device list

Device revocation / removal

3. Secure Token Management

Signed access tokens (JWT)

Token expiration

Refresh tokens

Token revocation

4. Session Security

Active session tracking

Session logout control

Logout from all devices

Automatic session timeout

Session lock on suspicious activity

5. Zero Trust Trust-Score & Risk Engine

Dynamic trust score calculation

Risk level classification

Continuous session verification

Risk-based access restriction

6. Policy-Based Access Control

Dynamic access control policies

Sensitive action protection

Privileged operation restrictions

Trust-based authorization

7. Privileged Access Security

Secure secret vault

Protected storage of API keys and credentials

Privileged access control

Privileged activity logging

8. Enterprise Identity Provider Integration

Token Validation API

Secure external application authentication

Identity provider architecture

No direct enterprise database access

9. Audit Logging & Security Monitoring

Login activity logs

Device activity logs

Session logs

Security event monitoring

10. Multi-Tenant Enterprise Isolation

Organization-level isolation

Separate enterprise environments

Tenant-based access control

B. Advanced Security Features Implemented

11. Hardware-Bound Device Identity

Device cryptographic key binding

Device-specific authentication

Prevents token reuse on other devices

12. Behavioral Trust Analysis

Behavior-based trust score adjustment

Detection of abnormal usage patterns

Automatic risk increase on suspicious activity
